### **DETAILED ACTION**

This office action is in response to the filing of the application papers on 31 April 2004. Claims 1-9 are pending.

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a method of forming a bump pad, classified in class 438, subclass 617.
- II. Claims 7-9, drawn to a bump pad, classified in class 257, subclass 737.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process. For example, the process as claimed requires subjecting a pulse-plating layer to electrolytic copper plating to form a direct current plating layer, however the product may subject a PC plating layer or PR plating layer to electrolytic copper plating either of which would form a direct current plating layer.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).
